CURRENT RESEARCH:

A book-in-progress on the subject of Infertility and Assisted Reproduction from the Development of in vitro Fertilization to the Present – Medicine, Culture, Policy, and Practice.

A collaboration with Wanda Ronner, this book will offer a comprehensive historical perspective of the changing dimensions of infertility treatment and the unprecedented ways by which families can be produced with the new reproductive technologies. Because the United States is virtually the only developed nation with no national policy on assisted reproduction, it has been called the "wild west" of reproductive medicine. For forty years now, the federal government has refused to fund, regulate, prohibit or approve reproductive technologies or practices such as in vitro fertilization, sperm, egg and embryo donation, or the use of gestational carriers and surrogates.

Societal conflicts involving reproductive technology have been so deep and divisive that the nation, unable to find common ground, has by default agreed to let the market determine access to these services. How and why did this state of affairs develop? What have been its effects on potential parents, gamete donors and surrogates, researchers, practitioners, and the larger society? And what might be done to change the situation? These questions lie at the heart of this work, and we address them in the following ways: 1) by offering a comprehensive historical perspective of the changing dimensions of infertility treatment and the unprecedented ways by which families can be produced with the new reproductive technologies; 2) by illuminating the larger societal forces that bear on patients, practitioners, gamete donors, gestational surrogates, insurance providers, legislators and others involved in reproductive decision-making; 3) by exploring how reproductive research and practice have both shaped and been shaped by changes in medical practice, family life, gender roles, marriage, socioeconomic class, and race; and 4) by using these findings as a basis for making recommendations on policy and practice.

Richard Stockton College of New Jersey: Marsh's most important administrative service at Stockton, besides the two times she led the Faculty of Arts and Humanities as Chair and Dean, was as Chair of the Research and Professional Development Committee in the late 1980s, in which capacity she created the college's first ever Grants Office, which was designed to work with faculty to develop research proposals at a time when research grants were more the province of universities than colleges. She also served on and often chaired numerous special committees and task forces, as well as numerous standing committees, including the Steering Committee of the Faculty Assembly; Academic Policy Committee; General Studies Committee, and the General Arts and Humanities Committee.
